

Public Goods and Ethnic Divisions

Presentation on "History of Economic Development"

Alberto Alesina, Reza Baqir, William Easterly

November 2009

- Ethnic fragmentation reduce public goods?
- Literature
 - Easterly and Levin (1997)
 - Glaeser, Scheinkman, and Shelifer (1995)
 - Tiebout (1958)

- Model

- Model
- Emirical finding (Robust Check)

- Model
- Emirical finding (Robust Check)
- Conclusion

- $u_i = g^\alpha (1 - l_i) + c$, where $0 < \alpha < 1$

- $u_i = g^\alpha (1 - l_i) + c$, where $0 < \alpha < 1$
- $c = y - t, g = t$

- $u_i = g^\alpha (1 - l_i) + c$, where $0 < \alpha < 1$
- $c = y - t, g = t$
-

$$U_i = g^\alpha (1 - l_i) + y - g$$

Equilibrium and implications

- $\max U_i = g^\alpha (1 - l_i) + y - g$

Equilibrium and implications

- $\max U_i = g^\alpha (1 - l_i) + y - g$
- $g_i^* = [\alpha (1 - \hat{l}_i)]^{1/(1-\alpha)}$

Equilibrium and implications

- $\max U_i = g^\alpha (1 - l_i) + y - g$
- $g_i^* = [\alpha (1 - \hat{l}_i)]^{1/(1-\alpha)}$
- $g^* = [\alpha (1 - \hat{l}_m)]^{1/(1-\alpha)}$

Equilibrium and implications

- $\max U_i = g^\alpha (1 - l_i) + y - g$
- $g_i^* = [\alpha (1 - \hat{l}_i)]^{1/(1-\alpha)}$
- $g^* = [\alpha (1 - \hat{l}_m)]^{1/(1-\alpha)}$
- Implications

- (insert Figure I)

- Index

$$ETHNIC = 1 - \sum_i (Race_i)^2$$
